Our Approach

- An evidence-based standardized pediatric encounter with FDA-cleared objective testing.
- Attentive dedicated time with the doctor in a pediatric practice devoted to patients with ADHD concerns.
- More accurate diagnosis guided by objective data and concern for a holistic comprehensive approach.
- Experience to provide a wealth of information, community resources, and internet links to ensure optimal functioning for our patients and families.
- Close follow-up based on current pediatric care standards to ensure optimal medication use and supporting therapies and interventions.
- Patients and families: Encouraged and Empowered.

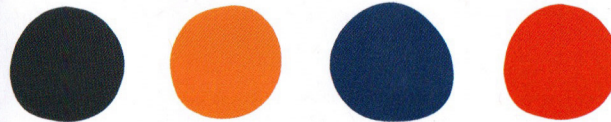

What to Expect

We Perform Objective Testing. Our testing system is an FDA-cleared computer based neuropsychological test that the doctor will interpret at the time of the visit to help identify core neurological features of ADHD. This testing provides objective data that, together with other information, will help to identify, rule out, and monitor ADHD symptoms.

At Attention-MD New Jersey, improving the lives of children and adolescents with ADHD and related conditions is our mission and our passion. We understand the aggravation. Let us guide you to acceptance and understanding.

ADHD is no little problem.

.....
